DETAILED ACTION

Response to Amendment

1. The present Office action is made in response to the amendment (Paper No. 10) of 5/23/2003. It is noted that in the mentioned amendment, applicant has added a new set of claims, i.e., claims 78-102, into the present application. As a result of addition, claims 1-5, 14-28, 39-46, 53-54 and 78-101 are examined in this Office action.

Allowable Subject Matter

2. The newly-added claims 78-102 are added into the application contain some board claims which are not allowable with respect to the art of record.

A careful review of the cited art has yielded the following conclusion: 1) Claims 1-5, 14-28, 39-46, 53-54 and 78-95 are allowable; 2) Claims 96-97 and 102 are rejected for the reasons as set forth below; and 3) Claims 98-101 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 102

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

4. Claims 96 and 102 are rejected under 35 U.S.C. 102(b) as being anticipated by Adrian et al (U.S. Patent No. 4,435,912, of record).

Adrian et al disclose an optical device for viewing an object. The device as described in column 2 and shown in figure 9 comprises an enclosed housing

having a top portion supporting a biconvex lens and a bottom portion supporting an object such as a microfilm to be magnified by the lens. Regarding to the term "microscope" as recited in the preamble of the claims, such term is not given a patentable weight because all of the features/limitations appeared after the term "comprising" do not provide any structure for the term "microscope" used/recited in the preamble of the claim(s).

5. Claims 96-97 and 102 are rejected under 35 U.S.C. 102(b) as being anticipated by Wallace (U.S. Patent No. 4,095,874).

Wallace discloses a microscope for viewing an object. The device as described in columns 5-6 and shown in figures 17-21 comprises a housing having a top portion supporting a spherical lens and a bottom portion supporting an object having an adhesive layer acting as a slide holding and locking mechanism to be magnified by the lens. The movement of the bottom portion with respect to the top portion due to the structure of the housing having the top and bottom portions.
